

CODY YOUNT

Senior Full Stack AI Software Developer | React, Next.js, TypeScript, Node.js, Python, FastAPI, PostgreSQL, AWS, RAG, Healthcare SaaS & Data Platforms

✉ codyyountred11@gmail.com 📍 Phoenix, Arizona 🌐 LinkedIn 📁 Portfolio 🐙 Github

PROFILE

Senior Full-Stack / AI Software Developer with 8+ years of experience building secure, scalable platforms across Healthcare, Fintech, SaaS, Prediction markets, and Analytics-heavy products.

Built real-time analytics and AI healthcare intelligence platforms, including **Wethr.net** and **Peerlogic**, reducing weather-market analysis from **11 hours to 8 minutes** and cutting manual clinic call review by **60–80%** through live data dashboards, forecast workflows, and automated communication insights.

Skilled in **React, Next.js, TypeScript, Node.js, Python, FastAPI, PostgreSQL, AWS, Docker, CI/CD, RAG, LLM tools, vector search, RBAC, audit logging, and secure API design.**

PROFESSIONAL EXPERIENCE

Self Employed | Freelancing, Software Engineer

04/2025 – Present | New York

- Built secure full-stack SaaS and analytics platforms for healthcare, fintech, AI, and prediction-market environments using React, Next.js, TypeScript, Node.js, Python, FastAPI, PostgreSQL, AWS, Docker, and CI/CD. Created Wethr.net, a platform reducing weather analysis time from 11 hours to 8 minutes with real-time data and trader-focused dashboards for Kalshi and Polymarket.
- Designed data workflows for temperature, forecasts, live data, and insights, speeding up decision-making by over 90% in weather trading.
- Developed backend architecture, REST APIs, PostgreSQL schemas, and secure data pipelines for over 5 production SaaS systems.
- Implemented AI/RAG workflows with LLM APIs and structured logic, cutting research and reporting tasks by 60%.
- Deployed AWS systems using Docker, Terraform, and CI/CD, reducing deployment time to under 15 minutes while enhancing reliability.

Peerlogic, DevOps Engineer

03/2022 – 03/2025 | Scottsdale, AZ

- Developed and maintained an AI-powered communication and revenue intelligence platform for healthcare and dental practices, enhancing front-desk dialogues into operational and revenue insights.
- Decreased manual call review time by 60–80% by transforming unstructured phone conversations into structured reports and insights.
- Enhanced operational transparency by designing dashboards to assess call outcomes, staff performance, and follow-up activities, reducing issue detection from hours to minutes.
- Managed production infrastructure, ensuring 99%+ uptime and supporting cloud deployments, monitoring, and incident resolution in a healthcare SaaS environment.

AdviNOW Medical, Senior Software Engineer

12/2017 – 02/2022 | Scottsdale, AZ

- Built an AI-powered healthcare automation platform for the patient journey, covering digital intake, symptom collection, clinical workflow support, and provider documentation.
- Developed backend services, APIs, frontend workflows, and database-backed features for healthcare modules, including intake, triage, documentation, and automation.

- Reduced intake and documentation tasks by over 50% with structured data capture, guided flows, automated workflows, and provider summaries.
- Designed secure healthcare software patterns for patient data, RBAC, auditing, workflow tracking, and compliance within 4+ clinical workflow areas.
- Enhanced platform reliability by fixing bugs, optimizing performance, supporting deployments, and resolving issues, reducing workflow interruptions by over 30%.
- Collaborated with product and clinical stakeholders to translate healthcare needs into software for patients, providers, and admin users across various care workflows.

WebPT, Software Engineer

08/2011 – 10/2017 | Phoenix, AZ

- Built database-backed features, permission-aware workflows, reporting logic, and documentation flows across 5+ core practice-management modules.
- Supported QA, production troubleshooting, release updates, and long-term platform maintenance, helping improve system reliability and reduce recurring user-facing issues by 25%+.
- Developed a strong healthcare IT foundation across permissions, auditability, reporting, compliance-aware development, data accuracy, and scalable SaaS engineering over 6+ years.

EDUCATION

Arizona State University, Bachelor of Computer Science
Computer Science

08/2007 – 05/2011 | Tempe, AZ

SKILLS

Backend Node.js, Python, FastAPI, Express.js, REST APIs, GraphQL, API Design, Microservices, Authentication, RBAC, Webhooks, Data Processing, Server-Side Architecture, Secure API Development	Frontend React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3, Responsive UI, Dashboard Development, Data Visualization, Component-Based Architecture, Frontend Performance Optimization
Database & Storage PostgreSQL, MySQL, MongoDB, Supabase, Redis, pgvector, SQL, Database Design, Data Modeling, Query Optimization, Relational Databases, Secure Data Storage, Analytics Data Pipelines	Architecture & Practices Full-Stack Architecture, SaaS Architecture, AI Workflow Automation, RAG Systems, LLM Integration, HIPAA-Aware Architecture, Audit Logging, Scalability, System Design
Cloud & DevOps AWS, RDS, Lambda, CloudWatch, Docker, CI/CD, GitHub, Vercel, Infrastructure Deployment, Environment Configuration, Monitoring, Logging, Cloud Security, Production Deployment	Tools & Workflow Git, GitHub, Jira, Slack, Postman, Figma, Notion, API Testing, Product Requirement Analysis, Founder Collaboration, MVP Development, Production Support

CERTIFICATES

Certified Professional in Healthcare Information and Management Systems (CPHIMS) HIMSS (Issued May 2018 • Expires May 2021 • Credential ID F00087123 • Credly)

PROJECTS

Wethr.net - Real-Time Weather Market Analytics Platform

05/2025 – 05/2026

- Built a real-time weather analytics platform for Kalshi/Polymarket traders, reducing manual weather research from 11 hours to 8 minutes with live forecast data, city-level tracking, and market-focused dashboards.
- Designed fast trader workflows for temperature ranges, forecast intervals, model comparisons, and live city data, improving decision speed by 90%+.
- Delivered the frontend analytics experience using React, Next.js, TypeScript, responsive UI, chart-based visualization, and performance-focused rendering.

AI Patient Communication & Revenue Intelligence Platform

03/2022 – 08/2023

- Built AI-powered healthcare communication workflows that converted front-desk conversations into operational and revenue insights.
- Reduced manual call review effort by 60–80% through searchable call insights, structured analytics, and dashboard-ready reporting.
- Developed backend workflows, event-processing logic, reporting pipelines, and dashboards to identify missed calls, follow-up gaps, patient demand, and revenue leakage.

AI Healthcare Automation Platform

12/2017 – 02/2022

- Built AI-powered patient intake, symptom collection, clinical workflow, and provider-documentation features.
- Reduced repetitive intake and documentation effort by 50%+ through structured data capture, guided workflows, and automated provider summaries.
- Developed backend services, API integrations, frontend workflows, and secure healthcare modules across 4+ clinical workflow areas.
